

Before Your New Window Film Is Installed

Reviewing the following items will help minimize disruptions and streamline the installation of your new solar window film.

Clear Window Space

Remove all items such as plants, frames, and miscellaneous items from the windowsills and surrounding areas. Please position window treatments to allow for easy access to the windows.

Furniture

Remove and/or rearrange any furniture that may hinder the installer's access to the windows. Please discuss movement of heavy furniture with property manager.

Airborne Contamination

To minimize airborne contamination during the installation, close all air conditioning and heating vents in the vicinity of the windows scheduled for film installation. This will reduce the amount of dust and lint in the air. It is also wise to clean floors and vacuum carpeting a day before the film installation begins.

After Your Film Is Installed

Film Dry-Out Time

During the installation process the installer will remove as much of the mounting solution as possible, although a small amount will remain. Trapped installation moisture may require a dry-out time. Cold or non-sunny weather conditions can lengthen the dry-out time, while warm weather and direct sunlight exposure will shorten dry-out time. Small water beads and a slightly cloudy look may appear during the dry-out time. If slow drying time does occur, do not become alarmed. The film will dry out completely. Do not attempt to pierce a water bubble in an effort to drain moisture – it will damage your film and is not covered by the warranty.

Cleaning

Do not clean the film for 30 days after installation. This will help secure proper curing of the special mounting adhesive to the glass. Plus the installer has just cleaned your windows, so you won't need to!

Cleaning Instruction After 30 Days

- Always use clean, soft materials to wash and dry your window film surfaces
- Most glass cleaners will work well, although a good cleaning solution for window film is ½ oz of liquid dish soap added to a quart of fresh water.
- Soft cloths or synthetic sponges are recommended for cleaning followed by a soft cloth or rubber squeegee for drying.
- Do not use any bristles, abrasive scrub, coarse materials, or cleaning materials that may have been contaminated with dirt particles.
